

Blower Purge Desiccant Compressed Air Dryers

IBP SERIES 500 - 4,300 SCFM

Since 1946, the world has turned to SPX FLOW's Pneumatic Products brand for the quality and service demanded by the most critical of applications. Global leaders of industry require durable components that deliver unquestionable reliability. Our precision engineered components and designs deliver outstanding service life and operational longevity. Invest in our experience and gain annuities that will grow for years.

Based in Charlotte, North Carolina, SPX FLOW is a leading global supplier of highly engineered flow components, process equipment and turn-key systems, along with the related aftermarket parts and services, into the food and beverage, power and energy and industrial end markets. SPX FLOW has more than \$2 billion in annual revenues and approximately 8,000 employees with operations in over 35 countries and sales in over 150 countries around the world. To learn more about SPX FLOW, please visit our website at www.spxflow.com

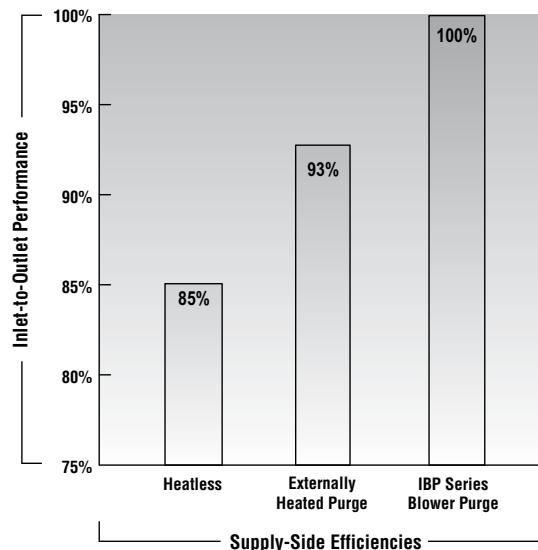

IBP Series Dryers

PRODUCE 100% EFFICIENT AIR SYSTEMS

IBP Series dryers improve air system efficiency by the use of a dedicated axial blower, instead of a percentage of dehydrated purge air, to regenerate the off-line desiccant tower. ISO 8573.1 Class 2 (-40°F/-40°C) dew point performance is guaranteed.

REDUCE ENERGY CONSUMPTION

As the air compressor is the most costly system component to purchase, and it uses more electrical energy than the rest of system combined, it is wise to ensure that the smallest appropriately sized air compressor is installed. IBP Series dryers are 100% efficient at delivering full supply-side compressor capacity. Therefore, users benefit from the ability to purchase a less expensive air compressor and a 20% reduction in compressor operating costs.

ELIMINATE COSTLY COMPRESSED AIR LOSS

Global competition, spiraling energy costs, and the challenge to “do more, with less” require manufacturers to closely examine operating costs. Compressed air generation tends to be the most costly utility within a facility. Eliminate air loss to align supply-side equipment with demand-side requirements to optimize your air system.

How It Works

Filtered compressed air enters on-line desiccant-filled, drying Tower 1 through valve (A). Up-flow drying enables the desiccant to strip moisture from the air stream. Clean, dry compressed air exits through (E) to feed the air system. Tower 2 (shown in regeneration mode) with valve (B) closed, depressurizes to atmosphere through muffler (C). Valves (D & F) open and the heater turns on. The high-efficiency blower draws ambient air and feeds it through the heater. The ambient air stream passes through valve (F) and flows downward through the moist desiccant in Tower 2, collecting water vapor before exiting valve (D). Once the desiccant is fully desorbed, the heater turns off. Valve (D) closes and Tower 2 is repressurized. At a fixed time interval, valve (B) will open and Tower 2 will be placed on-line to dry the airstream and valve (A) will close. Operations will switch and Tower 1 will be regenerated.

DEMAND-SIDE IMPACT ON SUPPLY-SIDE DRYER TYPES

PLANT AIR DEMAND scfm	DRYER TYPES Efficiency	AIR VOLUME REQUIRED TO MEET DEMAND scfm	AIR COMPRESSOR NEEDED TO MEET AIR VOLUME		COMPRESSED PURGE AIR PENALTY* dollars	PREFERRED SUPPLY-SIDE SOLUTION
			hp	scfm		
1,000	Blower Purge (100%)	1,000	200	1,000	\$0	Yes
1,000	Heated Purge (93%)	1,075	250	1250	\$11,436	No
1,000	Heatless (85%)	1,176	250	1250	\$24,506	No

* Assumes 5 scfm/HP, 8760 hours of operation per year, 10 cents per kW/h

IBP Series – Key Product Features

Towers filled with high-grade activated alumina to deliver superior performance

Standard Controls

- Tower Status
- Service Reminder
- Heater On
- Heater Temperature
- Desiccant Bed Temperature
- Failure to Switch
- RS 232

Easy-view vacuum fluorescent text display is visible under any condition

PCC & PCS Series Filtration

- Pleated media offers high capacity
- Uniform pore size reduces downstream contamination

Soft-seated check valves for tight shut-off and durability

Low-watt density heater saves energy and prevents premature desiccant aging

High quality pressure gauges display left tower, right tower and purge pressure

Function indicator LEDs for easy monitoring

NEMA 4 construction

Quiet, energy efficient, high-capacity blowers

Premium quality inlet switching/purge exhaust butterfly valves for long life on 3" and larger. (High-performance pneumatic angle-seated valves for smaller sizes.)

*Model Shown with Optional Features

Exclusive Feature Details

PCC & PCS SERIES FILTRATION

Critical applications and hostile environments demand premium grade products. Global industry leaders rely on PCS & PCC Series filters for their unmatched quality, durability and reliability in tough applications. PPC's large flow filters meet the challenge and provide contaminant protection for the premium grade desiccants used in our dryers as well as contaminant sensitive applications. Power plants, paper mills, refineries, and petro-chemical installations are a few examples of the challenging environments that rely on PPC filters for lasting protection.

Controller Feature List

	Controller Configuration

Inlet Flow

Inlet Flow (scfm) capacities shown in the Engineering Data table have been established at an inlet pressure of 100 psig (7kgf/cm²) and a saturated inlet temperature of 100°F (38°C). To determine maximum inlet flow at other conditions, multiply the inlet flow from the Engineering Data table by the multiplier from Table 1 that corresponds to your operating conditions.

Dew Point

Outlet pressure dew point at rated inlet conditions of 100 psig (7kgf/cm²) and 100°F (38°C) saturated. Dew point varies slightly at other conditions.

OPERATING CONDITIONS
